

5.3 Wrap-up

Applied Data Analysis (ADA)

Oxford DH Summer School - 2023

You made it!!

What's next: publishing your results

Working collaboratively: git and GitHub.

Publishing code: GitHub releases and Zenodo/Figshare.

Publishing data: Zenodo/Figshare.

Publishing results: Medium/arXiv.

Note: the importance of permanent storage and identifiers (e.g., DOIs).

What's next: citations and reproducibility

Associating a PID (permanent identifier) allows your work to be indexed, retrieved and properly cited. Example services include: OpenAIRE, DataCite, CrossRef.

See also [Citation File Format](#) for citing software/datasets.

Sharing your code and data allows others to reproduce your results and expand upon them.

Licensing

- It is likely your employer owns IP for your work, not you. Granting licenses therefore might require to discuss with legal or TTO.
- Proprietary vs free/open source software.
- Permissive FOSS (e.g., MIT) vs copyleft (guarantee perpetual open source, share-alike).
- For or not-for-profit.

GitHub options (for software): <https://choosealicense.com/>

Creative Commons: <https://creativecommons.org/licenses/>

Have your say

Anonymously via a survey we will circulate next week.

Directly now: 1up and 1 down :)

How to get in touch with us

Matteo: matteo.romanello@unil.ch

Nilo: nilo.pedrazzini@ling-phil.ox.ac.uk

Thank you!
